#### **DETAILED ACTION**

- 1. This action is responsive to communications: response filed 12/22/03 to the application filed on 5/11/99.
- 2. Claims 1-22 are pending in the case. Claims 1, 15, 17 are independent claims.
- 3. The rejections of claims 1-22 under 35 USC 103 (a) as being unpatentable over lchbiah in view of Lu have been withdrawn in view of Applicants' arguments.

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over lchbiah (US Pat No. 5,623,406, 4/22/97, filed 3/6/95) in view of Goldwasser (US Pat No. 5,096,423, 3/17/92, filed 12/29/87).

Regarding independent claim 1 and its dependent 9-10, Ichbiah discloses:

- storing in the memory a second data structure encoding a plurality of abbreviations and corresponding words (col 4, lines 53-67: a glossary of abbreviations and the corresponding words and phrases is stored in the system; col 5, line 25 to col 6, line 18; abstract: "retrieving words and phrases from abbreviations" suggests a list of abbreviation and corresponding words and

Application/Control Number: 09/309,831 Page 3

**Art Unit: 2178** 

phrases for retrieving)

displaying a list of suggested words and phrase corresponding to the selected abbreviation, and receiving input from the user to choose the desired word and phrase for the abbreviation (col 4, lines 53-67: the fact that multiple matching words and phrases for a proposed abbreviation are displayed by the system in the form of option in advisory table upon the entry of characters into the system suggests displaying a list of suggested words and phrases for an abbreviation for selecting; col 12, lines 42-67: more than one choice of matching words are displayed to users for selecting)

Ichbiah does not explicitly disclose:

- storing in the memory a first data encoding a plurality of words and corresponding abbreviations
- selecting a word in the text to be converted to an abbreviation and converting the
   selected word to a corresponding abbreviation
- selecting an abbreviation in the text to be converted to a word and converting the abbreviation to a word

Instead, Ichbiah discloses that:

- a glossary of abbreviations and corresponding words and phrases (col 5, line 25 to col 6, line 38) which is considered equivalent to the second data structure
- entering of data in the form of abbreviation and standard text entry (col 5, lines
   16-18)
- converting the abbreviation to the corresponding phrase (col 6, lines 10-60)

Art Unit: 2178

This inherently shows that the entered data in the form of abbreviation is selected to be converted to corresponding phrase using the data in the glossary. In other words, Ichbiah discloses selecting an abbreviation in the text to be converted to a word and converting the abbreviation to a word using the second data structure.

### Goldwasser discloses:

- storing a data structure encoding a plurality of words and corresponding abbreviations (col 5, lines 27-33: storing the sequences of keypresses, which are long sequences of characters of words, and the correspondent abbreviations)
- selecting a word in the text to be converted to an abbreviation and converting the selected word to a corresponding abbreviation using said data structure (abstract; col 2, lines 39-64; col 4, line 28 to col 5, line 11: recognizing the sequence of keypresses typed of a word that has a corresponding abbreviation and converting the keypresses into a corresponding abbreviation according to the stored list of words and corresponding abbreviation; said recognizing inherently indicates that said word in the entered text is selected for converting to abbreviation based the stored list in memory)

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to have combined Goldwasser into Ichbiah to obtain converting from a word and phrase to a corresponding abbreviation and converting from an abbreviation to a corresponding word and phrase since Goldwasser provides the first method and Ichbiah provides the second method where both are to help users fast finding a right word or a right abbreviation in writing documents.

Application/Control Number: 09/309,831 Page 5

Art Unit: 2178

Regarding claims 2 and 16, Ichbiah discloses editing, updating and customizing the data structures, which are words and corresponding abbreviations (col 7, line 55 to col 8, line 47; col 14, lines 3-27; col 11, line 35 to col 12, line 40). Lu also discloses these features (col 3, lines 17-36; col 5, lines 20-68).

Regarding claims 3-6, Ichbiah discloses that the word or an abbreviation is selected by a user using a keyboard command or using a mouse (col 3, lines 63-65; col 6, line 53 to col 7, line 3; col 12, line 60 to col 13, line 5; col 14, lines 29-58).

Regarding claims 7-8, 11-12, Ichbiah discloses:

- displaying a list of suggested abbreviations corresponding to the selected word and receiving input from the user to choose the desired abbreviation (col 5, lines 15-60)
- recognizing an abbreviation to be converted to words and phrases when entering text data (col 5, lines 16-24; col 6, line 33 to col 7, line 3; col 14, line 29 to col 15, line 55)
- receiving input from the user to choose the desired abbreviation corresponding to the phrase or to choose the desired phrase corresponding to the abbreviation (col 12, line 42 to col 13, line 20)
- converting the abbreviations to corresponding words or phrases (col 12, line 42 to col 13, line 20: the input command from the user is for converting an

Application/Control Number: 09/309,831

Art Unit: 2178

abbreviation to a corresponding word and phrase)

Ichbiah does not explicitly disclose:

- displaying a list of suggested words and phrases corresponding to an abbreviation
- scanning the text for words to be converted to abbreviations and converting words selected by the data processing to corresponding abbreviation
- scanning the text for abbreviations to be converted to words or phrases and Goldwasser discloses a list of suggested words and phrases corresponding to an abbreviation (col 3, lines 8-37: providing a menu of linguistic expressions of words and phrases having corresponding abbreviation for users to select one).

  It would have been obvious to an ordinary skill at the time of the invention was made to have modified Ichbiah and Goldwasser to include scanning text for abbreviations to be converted to corresponding words and scanning text for words and phrases to be converted to corresponding abbreviations for the following reason. The fact that the entry of data text is *recognized* for a corresponding abbreviation based on the glossary of words and abbreviations suggests scanning the entered text for a corresponding abbreviation.

Regarding claims 13-14, Ichbiah discloses selecting an abbreviation from the first data structure (abstract; col 3, lines 50-65), and selecting an abbreviation from the second data structure (col 4, line 53 to col 5, line 60). Ichbiah also discloses that when typing the abbreviation, the corresponding phrase is inserted in the displayed text (figure 3; col

Application/Control Number: 09/309,831

Art Unit: 2178

14, line 28 to col 15, line 27). This suggests that a phrase or word corresponding to a

selected abbreviation is inserted into the text at a position selected by the user.

Independent claim 15 includes the same limitations as in claims 1, 9-10, and 13-14, and

is rejected under the same rationale.

Independent claim 17 and its dependent claim 22 are for a data processing apparatus

for performing the method claims 1, 9-10, and 13, and are rejected under the same

rationale.

Claims 18-22 are for a data processing apparatus of method claims 7-8, 11-12, and are

rejected under the same rationale.

Response to Arguments

6. Applicant's arguments with respect to claims 1-22 have been considered but are

moot in view of the new ground(s) of rejection.

Applicants argue that Lu does not disclose storing in a memory a first data structure

encoding a plurality of words and corresponding abbreviation followed by selecting a

word in the text to be converted to an abbreviation and converting the word to an

abbreviation using the first data structure (Remarks, page 7).

Examiner agrees.

Goldwasser, cited in this office action, discloses:

Page 7

Application/Control Number: 09/309,831

**Art Unit: 2178** 

 storing a data structure encoding a plurality of words and corresponding abbreviations (col 5, lines 27-33: storing the sequences of keypresses, which are long sequences of characters of words, and the correspondent abbreviations)

selecting a word in the text to be converted to an abbreviation and converting the selected word to a corresponding abbreviation using said data structure (abstract; col 2, lines 39-64; col 4, line 28 to col 5, line 11: recognizing the sequence of keypresses typed of a word that has a corresponding abbreviation and converting the keypresses into a corresponding abbreviation according to the stored list of words and corresponding abbreviation; said recognizing inherently indicates that said word in the entered text is selected for converting to abbreviation based the stored list in memory)

### Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
